Future Kings, in partnership with the WISH, is offering a special workforce development program for rising sophomores, juniors and seniors. The program is designed to prepare selected students for entry-level jobs in the cybersecurity field. In order to qualify, you need to be detail-oriented, motivated, not-afraid to learn, and comfortable with using computers. You do not need to have previous coding skills.
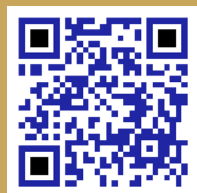

Cybersecurity is also commonly called "Data Care". It focuses on providing protective care for the information and processes of an individual or organization. Participants who become skilled in various Data Care professions should expect to be hired in jobs that pay at least $70,000. After 2 years on the job, Data Care professionals can expect to earn over $110,000. There is no ceiling to the amount that Data Care professionals can earn. Jobs are available in health sciences, banking, retail sales, financial services, legal services, engineering, government, military, construction, entertainment, and more.

FUTURE KING
CYBER SECURITY

Highlights of the program

- Prepare for entry-level jobs
